Introducing Paul Rapino

The InterWork Alliance is pleased to announce the appointment of Paul Rapino as our Head of Growth. Before joining us, Paul worked in sales and business development roles with two blockchain startups that focused on fractionalizing high valued assets with tokenized payments and smart contracts. Earlier, he was Director of Digital Financial Services at Microsoft in New York and Seattle, where he was on the leading edge of the Information Economy and the World Wide Web. He also volunteers as the Chapter Director for TF Blockchain.

Paul will be a great asset to the IWA team as he has been deeply involved with both enterprise and startup companies that see an opportunity to drive the new Token Economy. Paul shares the IWA vision that, while tokenization technology has the ability to greatly improve trust and authenticity in multi-party interchange of value, the lack of specifications focused on interworking across technologies, industries, and technology vendors is inhibiting web-scale adoption of tokenization. By bringing his skills to bear at the IWA, Paul will help this rapidly growing organization deliver the common specifications and frameworks required to enable tokenization to disrupt global economics and radically improve how commerce is transacted.

“I want to grow membership and partnership with companies that want to collaborate within the IWA to bring their business use cases to life in a wide variety of areas, such as environmental sustainability, digital currencies, security, global trade and supply chains, and real estate.”
To name just a few”, said Paul. “I’m most excited about helping our members develop and use standards-based interworking specifications across all platform technologies, and enable multi-party interchanges and transactions.”

The InterWork Alliance (IWA) is a non-profit, member-led organization creating platform-neutral specifications and trusted certification to define how digital token business processes can interwork regardless of location or market segment. By focusing on real-world projects, market requirements, and performance metrics, the IWA will define tokenization and interworking standards to drive business-level interoperability, multi-party interchange, and trust across applications and networks.
